Every coach—from our smallest Class C to our largest diesel-pusher model—is built to Winnebago Industries’® legendary SuperStructure® construction standards. It’s a process developed and refined over more than 50 years of building some of the strongest, most durable coaches in the industry.
**TESTING**  Before rolling out of our factories, every coach undergoes an extensive 113-point inspection. Each coach also passes a high-pressure water test that simulates rain at a rate of 50-inches per hour to check for leaks. During the design process, our computer simulations, physical testing center, and rigorous test track ensure each model is built to last.

**DETAILS**  At Winnebago Industries, we treat the features you can’t see with the same care as the ones you can. Look in the access panels of some of our competitors’ coaches and you’ll see loose insulation and wires haphazardly strewn about. Winnebago Industries maintains a clean fit and finish throughout so your coach will last for the long haul.

**BUILT IN-HOUSE**  We extrude our own aluminum. We rotocast our own plastic components. In fact, we manufacture most of our own parts so they are designed to fit the space, rather than fitting the space to an awkward off-the-shelf component size.

Visit BetterBuiltRVs.com to gain real insight into what goes into a Winnebago Industries motorhome.

**TAKE A TOUR**  We’re proud of our processes, state-of-the-art facilities, and the people who make Winnebago Industries number one. We invite you to visit our complex in Forest City, Iowa, for a first-hand look at the dedication and technology behind every motorhome we build.

1. The height of each model is measured to the top of the tallest standard feature and is based on the curb weight of a typically equipped unit. The actual height of your vehicle may vary by several inches depending on chassis or equipment variations. Please contact your dealer for further information.
2. Floorplans feature a wide-body design – over 96” In making your purchase decision, you should be aware that some states restrict access on some or all state roads to 96” in body width. Before making your purchase decision, you should confirm the road usage laws in the states of interest to you.
3. The load capacity of your motorhome is designated by weight, not by volume, so you cannot necessarily use all available space when loading your motorhome.
4. Capacities are based on measurements prior to tank installation. Slight capacity variations can result due to installation applications.
5. Capacities shown are tank manufacturer’s listed water capacity (W.C.). Actual filled LP capacity is 80% of listing due to overfilling prevention device on tank.
6. Actual towing capacity is dependent on your particular loading and towing circumstances, which includes the GVWR, GAWR, and GCWR as well as adequate trailer brakes. Please refer to the Operator’s Manual of your vehicle for further towing information.
7. See separate chassis warranty.
8. See your dealer for complete warranty information.
